- Backend: Node.js, Express.js, RESTful APIs
- Database: MongoDB, Mongoose
- Authentication & Security: JWT, Password Hashing, CryptoJS Encryption
- Tools & Integrations: Git, GitHub, Postman, Cloudinary, Third-Party API Integration

EXPERIENCE:

MERN Stack Developer Independent Contractor

2023- Present

- Develop full-stack web applications using MongoDB, Express.js, React.js, and Node.js.
- Build responsive user interfaces and reusable React components with a focus on usability and maintainability.
- Develop RESTful APIs, implement server-side logic, and integrate frontend applications with backend services.
- Implement authentication, authorization, and secure data-handling features.
- Integrate third-party services, manage file uploads, and troubleshoot application issues.
- Use Git and GitHub for version control and project management.

PROJECTS:

Continued on Next Page →

Kyphora — Secure Password Manager & Digital Vault SaaS

Developed a digital vault for managing passwords, API keys, secure notes, and payment card details.
Implemented data encryption using Crypto module to protect sensitive information.
Integrated two-factor authentication (2FA) compatible with Google Authenticator.
Built a security dashboard featuring security scores, password strength analysis, and weak, medium, and strong password indicators.
Implemented login history and active session monitoring with session management controls.

Zentro — Full-Stack E-commerce Web Application

Technologies: React.js, Redux Toolkit, Node.js, Express.js, MongoDB
Developed a full-stack e-commerce application with dedicated user, seller, and admin interfaces.
Built product browsing, product details, shopping cart, and order management functionality.
Implemented client-side routing and centralized state management using React Router and Redux Toolkit.
Integrated frontend components with backend APIs to support product management and application workflows.
Worked on image upload functionality using Cloudinary for product management.
